

Pendo Data Sync

Export product data to your Amazon S3, Microsoft Azure, or Google Cloud Storage

When your Data Science team has product data, they're able to extract deeper, contextual insights. Connect Pendo product usage data to your cloud storage so you can make product data a key input in your end-to-end business analysis.

What's possible when product data meets business data:

- **Centralize and share** business insights from a single BI tool
- **Build a complete user journey** with contextual business data from all important sources, from sales, to marketing, to support, and more
- Gain a **global view of visitor analytics** across multiple product lines using different analytics tools
- Blend NPS data with historical account data to contextualize user sentiment and **create a customer health score**

Don't **waste precious time managing complex API calls** or **spending budget on 3rd party connector tools** to extract product usage data. Export enriched event data in a format designed for pipeline automation and seamless warehouse ingestion.

Ready to unleash the full power of your product data?
